“ The evolution of the surgical techniques in Periodontology in the last years leads as consequence, to an evolution of the surgical instruments. The introduction of Ultrasonic or Piezo tips for osseoresective procedure, loops and operative microscope redesign the surgical armamentarium. This Kit has been thought for all the most recent periodontal procedures. ”

HU-FRIEDY IMS INSTRUMENT MANAGEMENT SYSTEM

By standardising your instruments with IMS, additional time and revenue is generated while extending the useful life of your Hu-Friedy instruments. Dental professionals state that by implementing IMS, they save 5 to 10 minutes* per procedure allowing the staff to spend more time on value-added activities.

In addition, safer transportation of soiled instruments reduces risk of injury and exposure to blood borne pathogens.

* When compared to single instrument decontamination, based on market survey results.
