3D TUNNELING TECHNIQUE USING CLASSICAL AND ALTERNATIVE GRAFT SHAPE AND PLACEMENT METHODS

This workshop will be useful for both, beginners and experienced specialists, who need a clear structured scheme and protocols for the microsurgical periodontal work. During the main part of it participants would train a surgical restoration of lost interdental periodontal tissues using a novel 3D Tunneling Technique. The aim of the workshop is to show possibilities to truly get the perspective of what perio is nowadays. It will change the practice and elevate the mindset of every periodontist.

Microsurgical training - 1 h

**3D tunneling surgical training on specially designed Bonemodells
using a microscope - 2 h**

20 JUNE | Dr. Masana Suzuki

INTER-DENTAL PAPILLA RECONSTRUCTION • PRACTICE ON IPAC TECHNIQUE • HARVESTING OF CTG FROM PALATE • PRACTICE ON INTER-PROXIMAL POUCH APPROACH USING CTG (IPAC TECHNIQUE)

In this workshop, I will explain you the Inter-proximal Pouch Approach using C.T.G (IPACT Technique) which I started in the year 2000 by using the original training model. First step is to harvest a CTG from palatal site by applying the single incision technique. Attendants will challenge some of key essences during this procedure. The next step is to trim the harvested CTG in the shape of the recipient site (papilla) and to transplant it. Attendants will challenge these procedures in step by step.

Microsurgical training - 1 h

Suzuki's papilla reconstruction technique using a microscope - 2 h

PACKAGES

Workshops are exclusively available for Reunion participants

EARLY REGISTRATION

Reunion	€ 400
Reunion + workshop 1	€ 900
Reunion + workshop 1-2	€ 1.500

REGULAR REGISTRATION - after 31.12.25

Reunion	€ 500
Reunion + workshop 1	€ 1.100
Reunion + workshop 1-2	€ 1.800
