PREVENTIVE DENTISTRY

Straumann® Emdogain® and Labrida BioClean™

CLEAN

Labrida BioClean™ is a medical device designed for effective cleaning of osseointegrated dental implants and/or teeth with pocket depths ≥ 4 mm). Removal of plaque-forming bacteria from the infected dental implant/tooth surface is the first step in biofilm management.

REGENERATION

Straumann® Emdogain® FL consists of a unique gel containing enamel matrix derivative. This mixture of natural proteins forms a matrix that stimulates certain cells involved in the healing process of soft and hard tissues. Adding Straumann® Emdogain® or Straumann® Emdogain® FL to cleaned tooth or implant surfaces can improve the clinical outcome of the procedure.

EDUCATION

Hu-Friedy

By standardising your instruments with **IMS**, additional time and revenue is generated while extending the useful life of your Hu-Friedy instruments. Dental professionals state that by implementing IMS, they **save 5 to 10 minutes* per procedure allowing the staff to spend more time on value-added activities**. In addition, safer transportation of soiled instruments reduces risk of injury and exposure to blood borne pathogens.

* When compared to single instrument decontamination based on market survey results
